## WEATHER SYNOPSIS BY REGION:

### **NORTHERN CALIFORNIA AND CENTRAL COASTAL AREAS:**

#### **Eureka Weather:**

Hot and dry conditions will grip the interior portions of northwest California today. Some locations may experience record heat. Meanwhile, at the coast another fair and warm day will prevail with locally breezy winds. More seasonable conditions will arrive this weekend.

#### **Medford Weather:**

This will be the second day with 90+ degree heat at the south coast; a heat advisory has been issued. Sunny, dry, very warm weather will persist just about everywhere else across the region with north to northwest breezes this afternoon. Saturday as the upper trough swings through Washington and into northern Idaho and Montana, dry westerly flow aloft will persist, so not expecting any precipitation, though temperatures will be a few degrees lower than today. On Sunday, an upper trough approaches the coast with the mid-level flow becoming more southwesterly. Some moisture from the northern California Mountains to the Siskiyou's and the warmer mountains south of Lakeview there is a slight chance of thunderstorms in the forecast. The rest of the area will be dry and warm with highs in the upper 80s and lower 90s in the valleys west of the cascades. The upper trough will move onshore on Monday and once again most areas will just be warm and dry.

#### **Reno Weather:**

A warm and dry pattern is expected for the weekend and into the upcoming week. High temperatures will warm well into the 90s for the lower elevations with 70s and 80s in the sierra. After light winds today, afternoon zephyr breezes can be expected each day.

#### **San Francisco Weather:**

Dry weather conditions are expected through early next week. High pressure over the region today will result in above average temperatures, especially for inland areas. Temperatures will then cool slightly this weekend into next week as a weak upper level trough approaches the coast.

# WEATHER

## WEATHER SYNOPSIS BY REGION:

### **CENTRAL CALIFORNIA AND SOUTHERN SAN JOAQUIN VALLEY:**

#### **Sacramento Weather:**

Dry weather expected through next week. Hot temperatures peaking today with triple digits through the valley, then a gradual cool down for the weekend into early next week.

#### **Hanford Weather:**

An upper level low will continue to track slowly eastward and exit into the great basin allowing for a return to higher pressure bringing above normal temperatures to the area today and drier conditions by Saturday. Scattered showers and thunderstorms will be possible over the mountains and kern deserts this afternoon and evening.

### **SOUTHERN CALIFORNIA:**

#### **Los Angeles Weather:**

Thunderstorms are likely to develop over the mountains this afternoon and persist through the early evening. These thunderstorms will be the potential for flash flooding. Otherwise a trough of low pressure over the region will linger through early Saturday, keeping a persistent marine layer and onshore flow in place through Saturday morning. High pressure will begin to build over the area Saturday afternoon, producing a warming and drying trend through the weekend.

#### **Extreme Southwestern California including Orange, San Diego, Western Riverside and Southwestern San Bernardino Counties:**

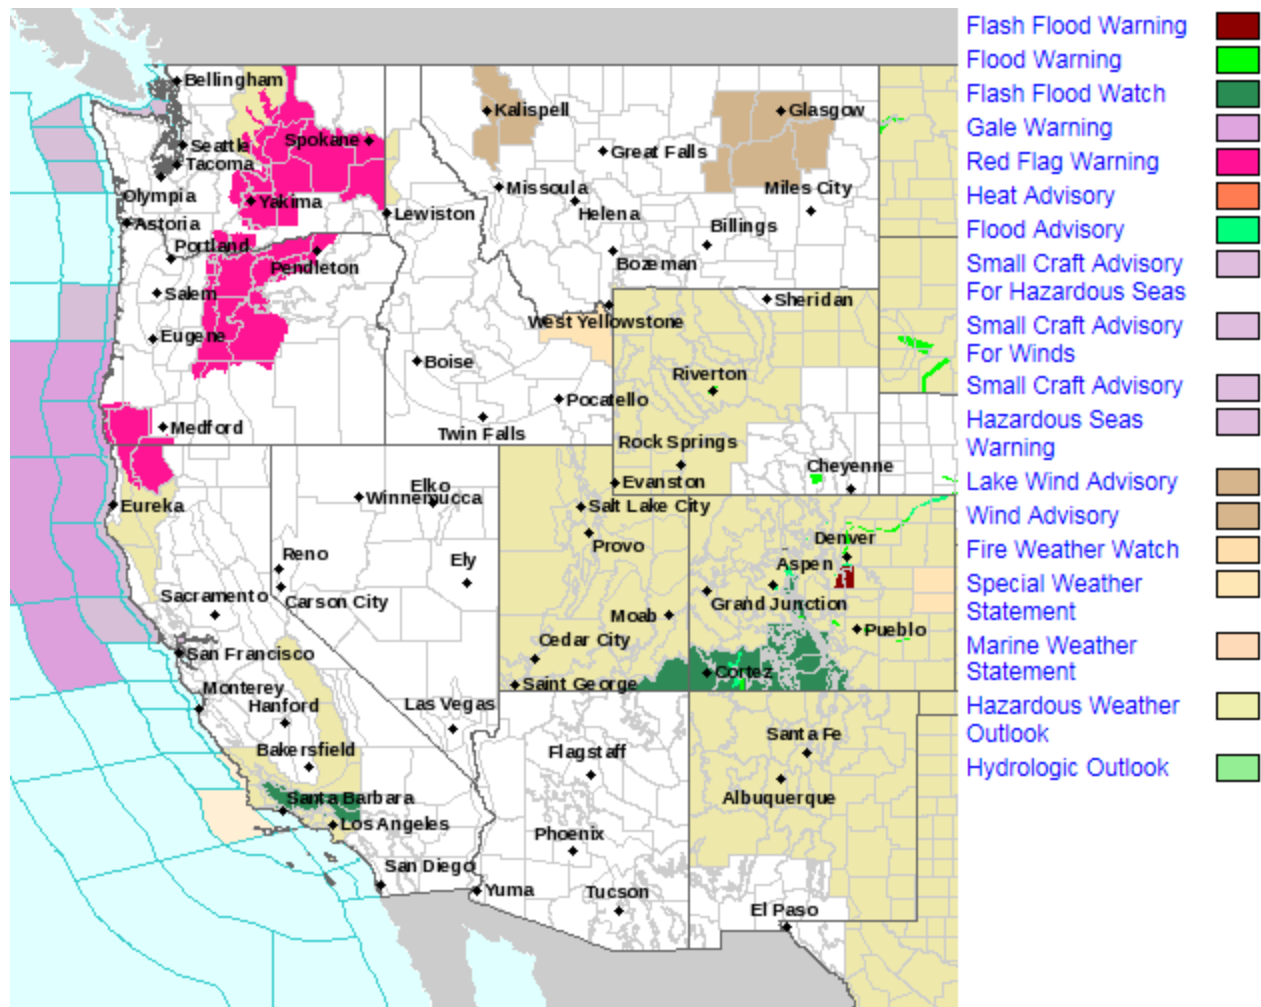

A deep marine layer with extensive low clouds will persist along the coast and into the valleys this morning. An upper level low pressure trough will trigger scattered showers and thunderstorms over the San Bernardino Mountains and high deserts this afternoon and evening. over the weekend, a warm dome of high pressure will build across southern California, bringing significant warming and a much shallower marine layer through early of mid next week.

#### **Southeast California Weather:**

While a couple weak weather disturbances may spark some isolated showers over higher terrain of northern and eastern Arizona through the weekend, the majority of the region will remain dry with temperatures rising into an above normal category. Much stronger high pressure will build into the desert southwest next week leading to a significant warming trend where many lower deserts locations will finally reach the 110 degree threshold.
